

Wanted...

\$500 as you support research on science professional development.

All you have to do is:

- ✓ Complete two tests (Diagnostic Teacher of Mathematics and Science Test (DTAMS) test and a Life/Physical Science Content test) at the start and again at the end of the project.
 - The first set of tests will be given in February/March 2015
 - The second set of tests will be given in November/December 2015
 - The tests takes about 60- 90 minutes to complete
 - The test results are anonymous and will be used only to compare with other groups of teachers that receive professional development
- ✓ Allow our project evaluator to observe your science instruction at the start and again at the end of the project (this takes 30min-1hr max)
 - These will be announced observations, will be scheduled to accommodate your needs, and will not deter from your classroom instruction in anyway
 - The observation notes and results are anonymous (any reports describing the observation will use aggregate data – you will not be identifiable)

That's it! That is all that is required to earn \$500.

If you are interested, and are not presently participating in an MSP science grant, please complete the survey monkey application <https://www.surveymonkey.com/s/mssscontrol>
