

Lunch and Learn: Early Stress and Adult Health — The ACE Study

Presented by Claire Louge, M.Ed.

Thursday, April 23rd, 2015
11:30 AM - 1:00 PM

Prevent Child Abuse Arizona
3298 Bob Drive
Prescott Valley, AZ 86314

Stress and trauma in childhood affects later adult health. Yavapai Communities for Kids, a project of Prevent Child Abuse Arizona, is inviting the community to a free presentation about the Adverse Childhood Experience (ACE) Study, an ongoing research study that demonstrates the link between early stress and adult disease. In addition, participants will learn about the Strengthening Families Protective Factors, which work to both prevent ACEs from occurring and build resilience to their negative effects.

A complimentary lunch will be provided.
